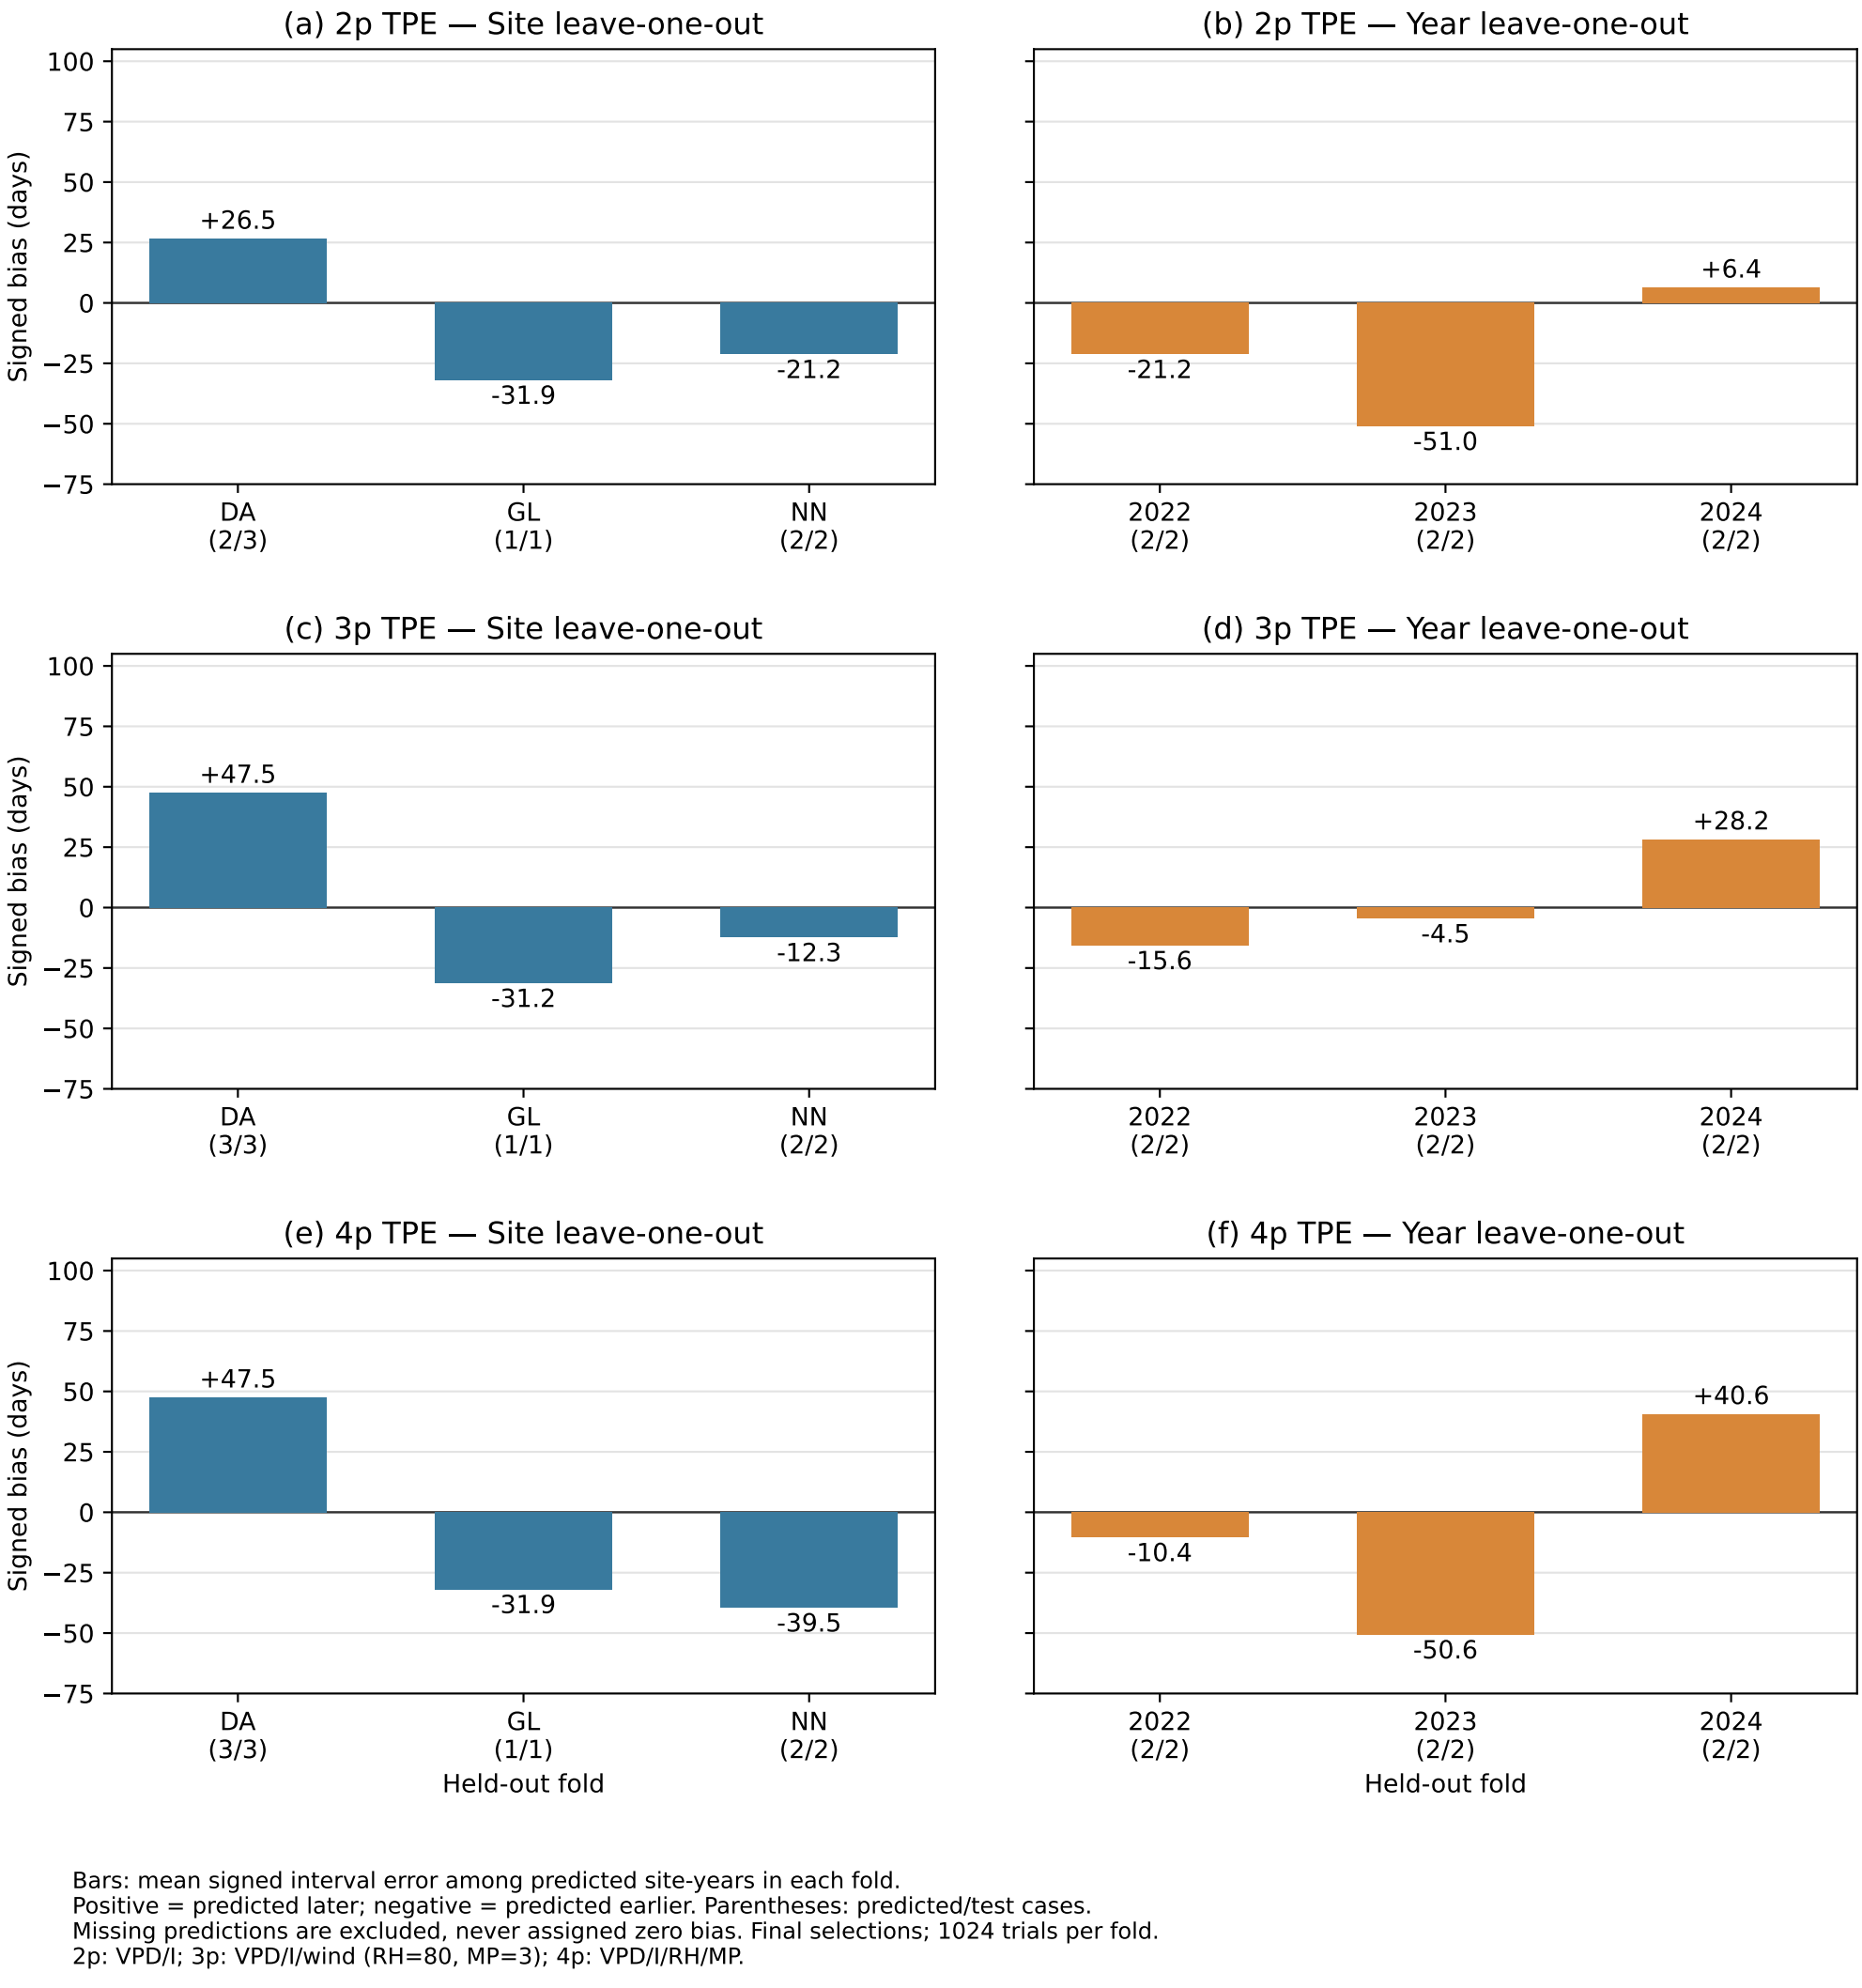
TPE: per-fold held-out bias



Bars: mean signed interval error among predicted site-years in each fold.
Positive = predicted later; negative = predicted earlier. Parentheses: predicted/test cases.
Missing predictions are excluded, never assigned zero bias. Final selections; 1024 trials per fold.
2p: VPD/I; 3p: VPD/I/wind (RH=80, MP=3); 4p: VPD/I/RH/MP.
