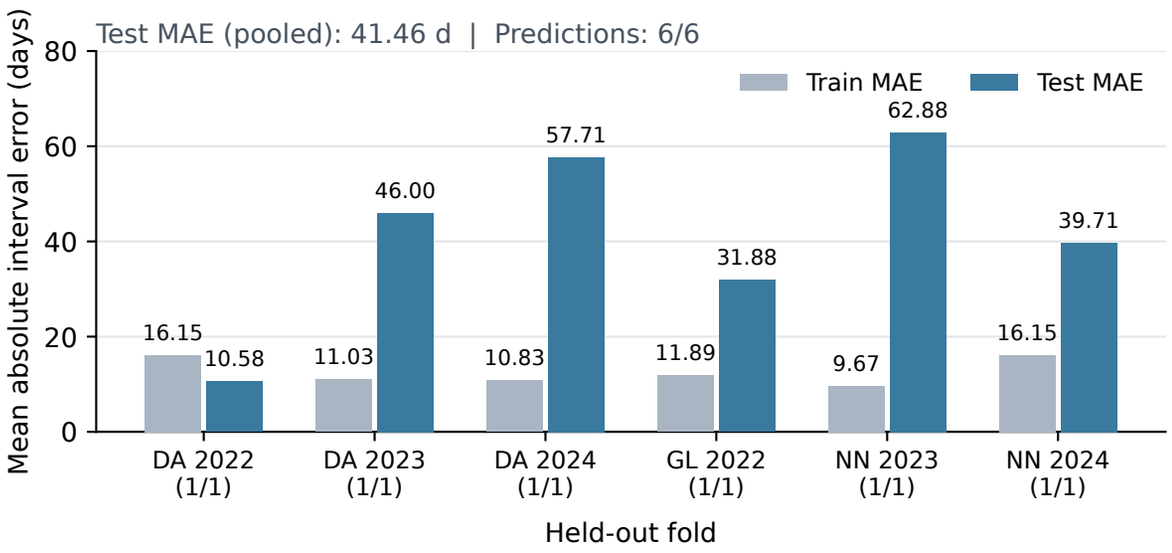
Plan A: 2p TPE selection comparison

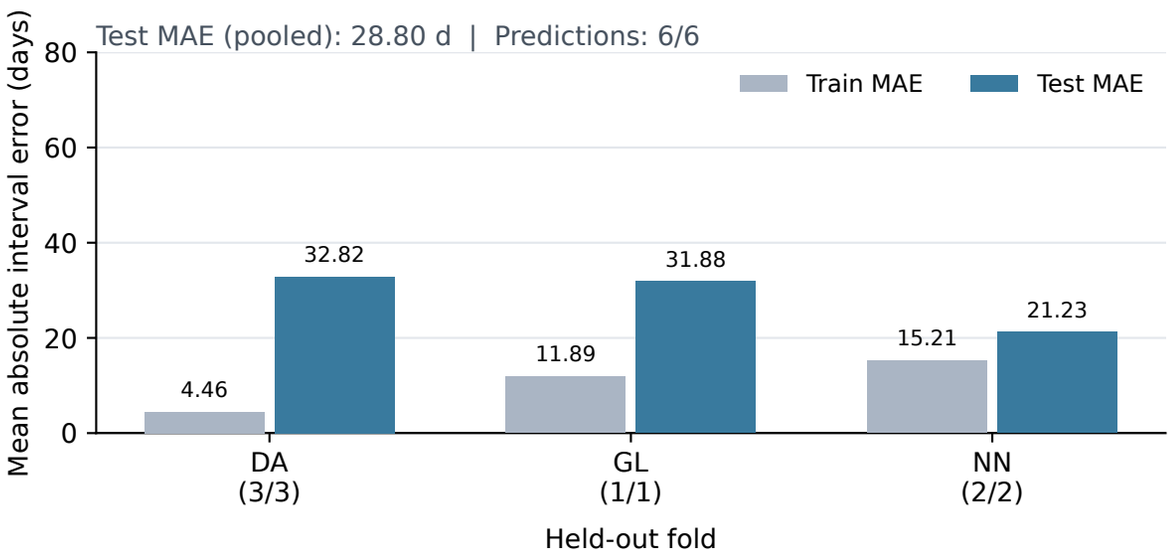
seed = 123 | 1024 training trials per fold | six site-years

Minimum training MAE

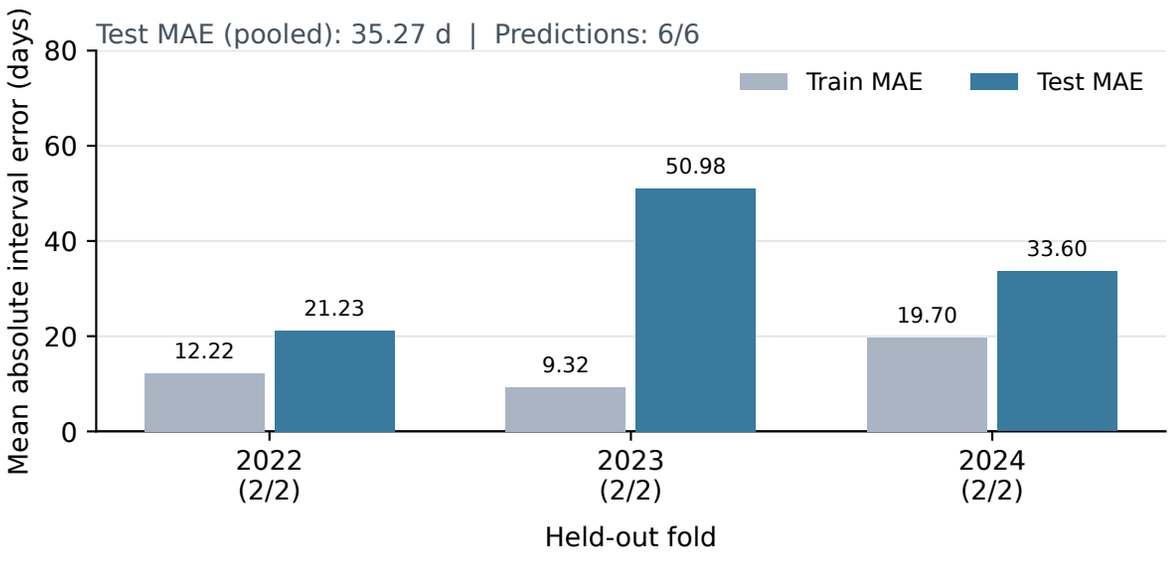
(a) LOSYO



(c) Leave-one-site-out



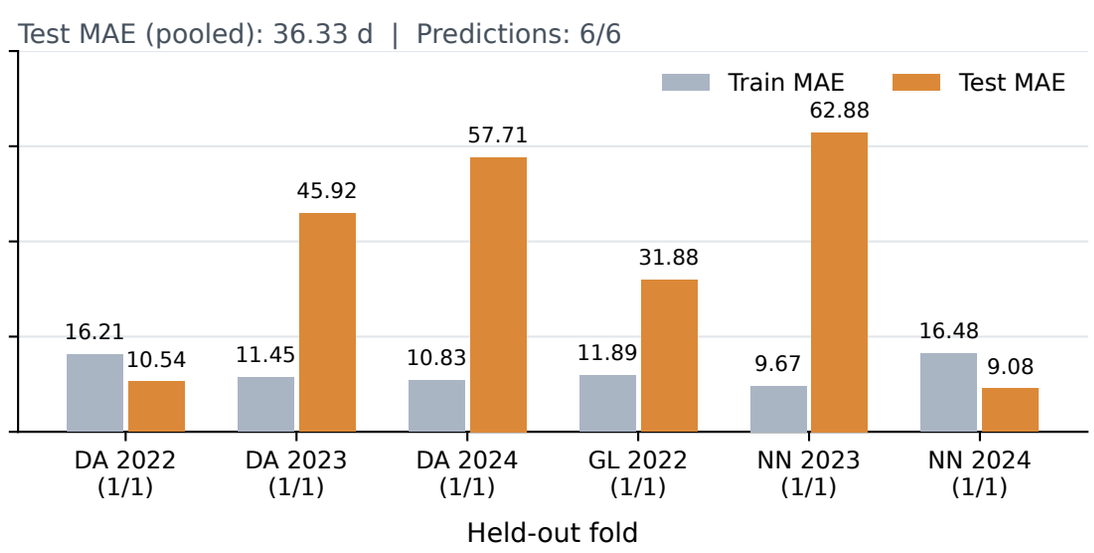
(e) Leave-one-year-out



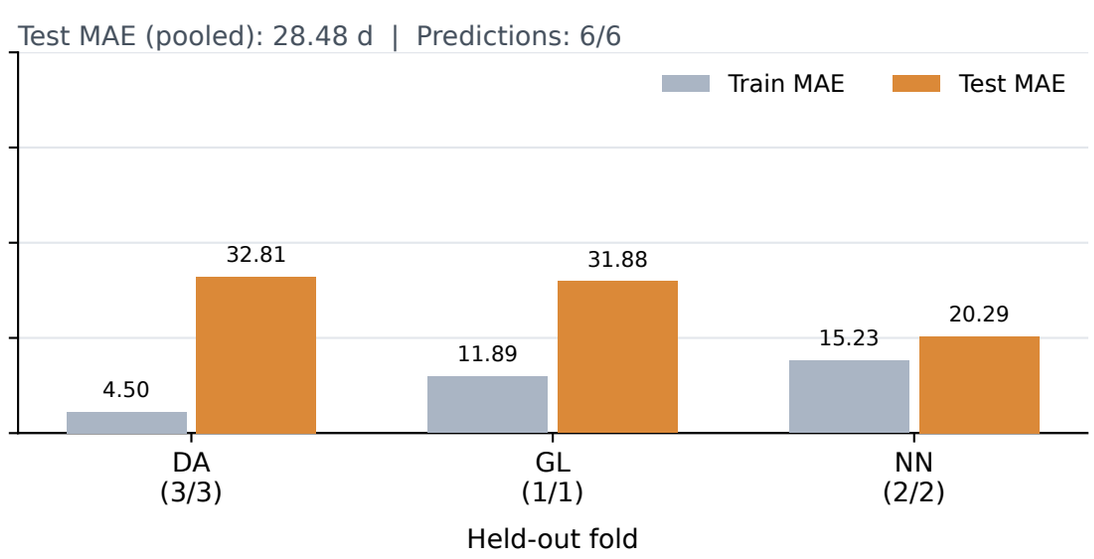
Training MAE ≤ minimum + 1 day

Then minimum test MAE (exploratory)

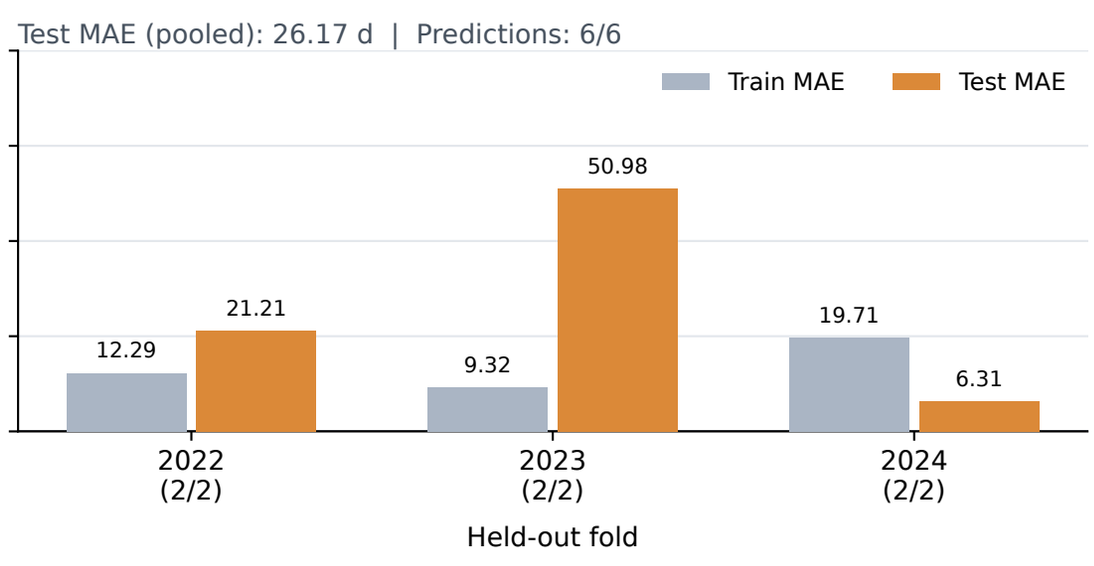
(b) LOSYO



(d) Leave-one-site-out



(f) Leave-one-year-out



Paired bars: training MAE (gray) and test MAE (blue/orange), using the parameters selected in each column.
Parentheses: predicted / test cases. Missing predictions are not assigned zero; panel test MAE pools site-years.
Right column uses test outcomes for selection and does not represent independent test performance.
