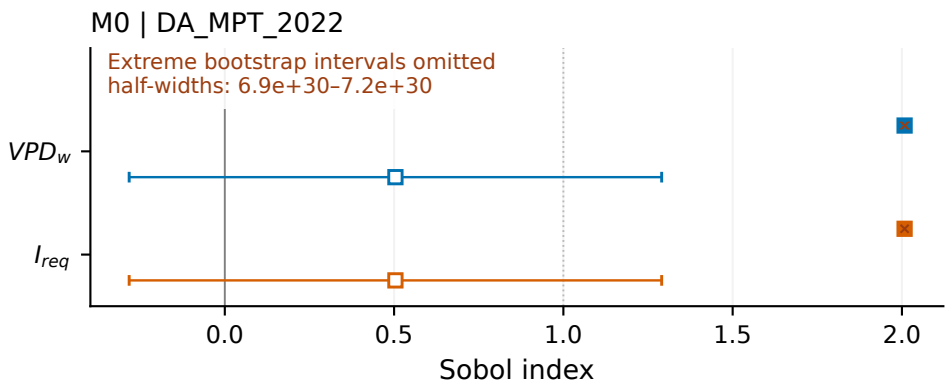
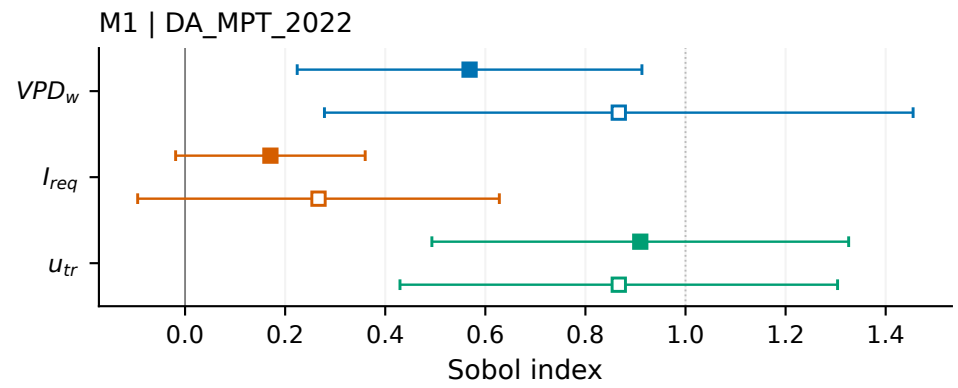
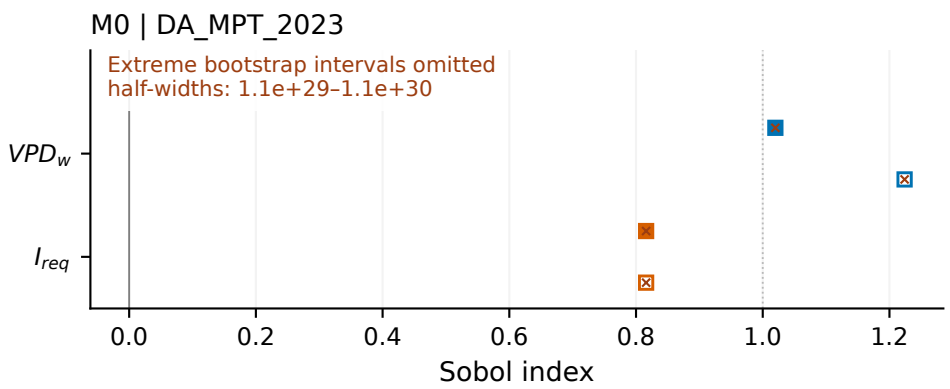
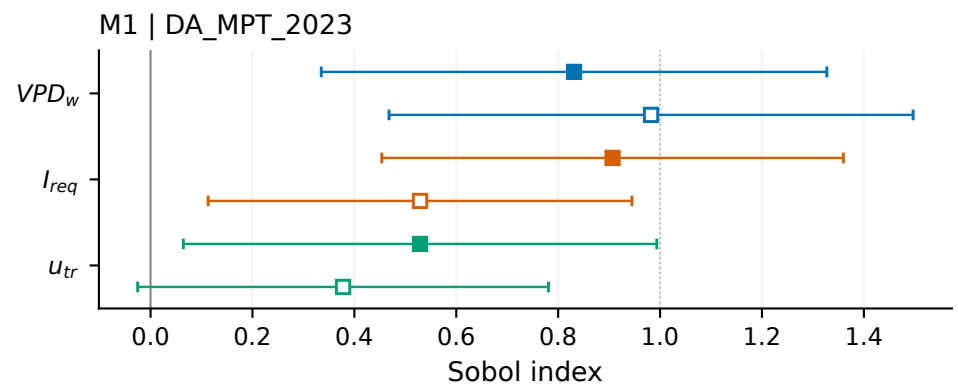
Site-year prediction availability: total effects (ST) | N = 128

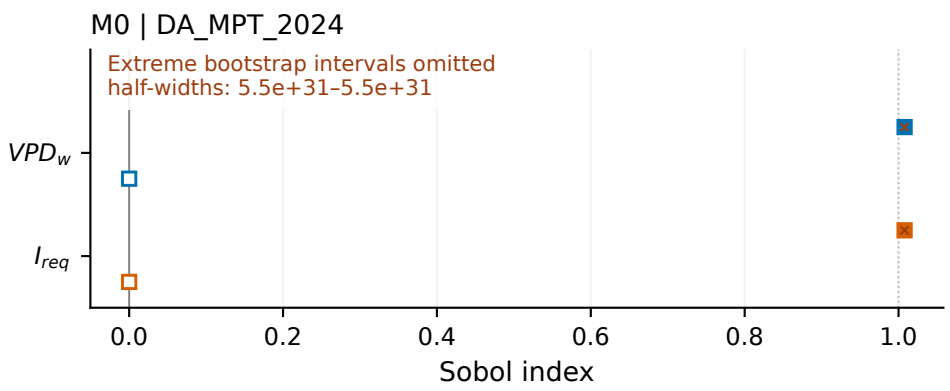
■ Seed 1: 20260913 □ Seed 2: 20260914

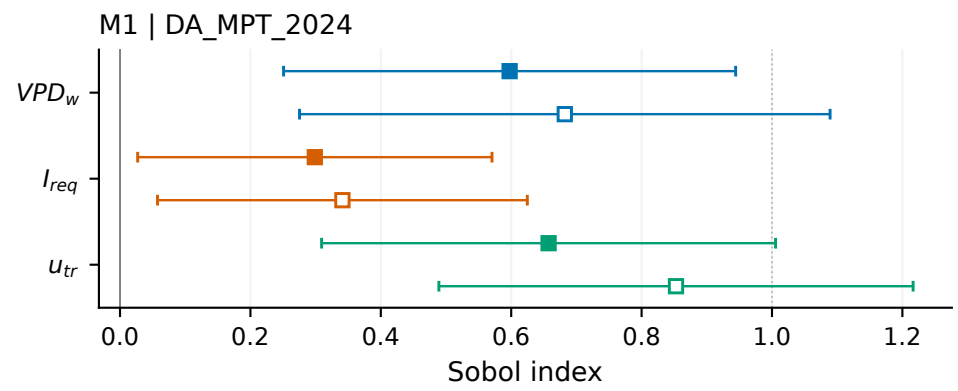


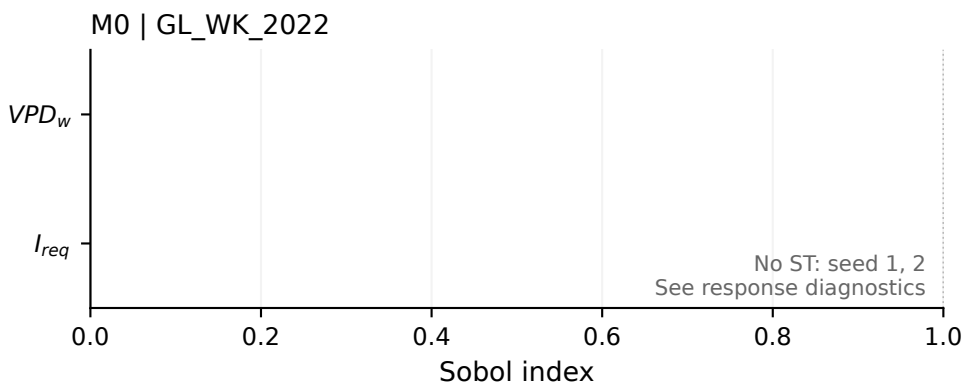


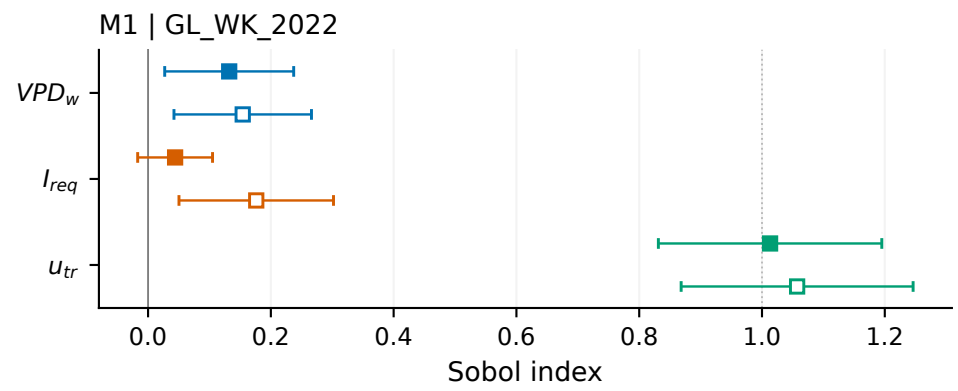


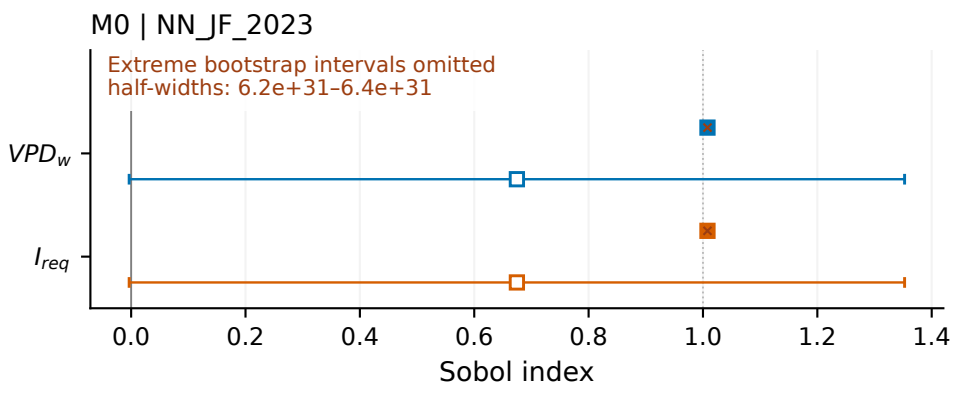


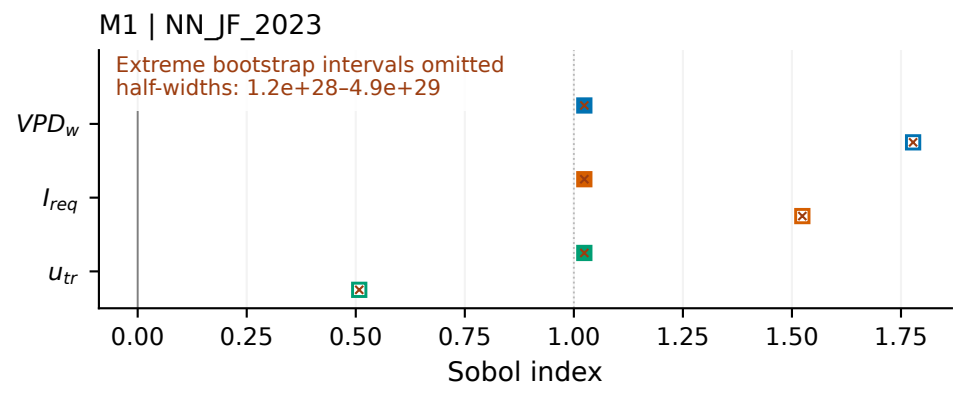


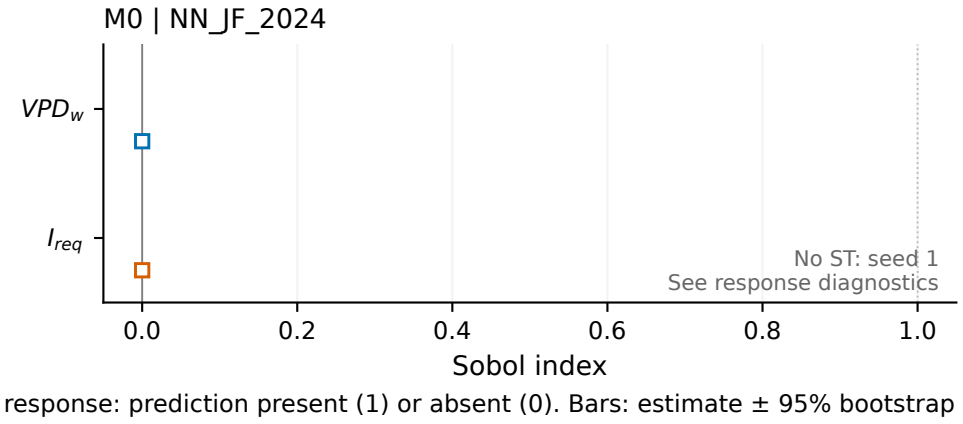


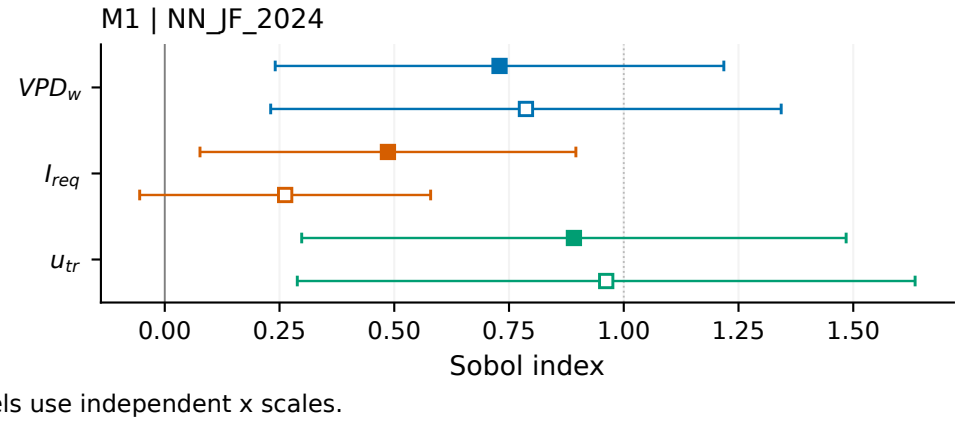












Binary response: prediction present (1) or absent (0). Bars: estimate ± 95% bootstrap half-width; panels use independent x scales.
Crosses: extreme intervals omitted and explicitly annotated. Constant responses have undefined ST, not zero sensitivity.
ST includes interactions; estimates above one are retained. Uncertainty and rare missing outcomes preclude some rankings.
